ORTF-2plus2
WINDSHIELD WITH FUR OR RAIN COVER

SETUP GUIDE

CONTENTS

1. REMOVING THE TRANSPORT LOCK

The ORTF-2plus2 windshield is often shipped with a foam ball transport lock ("Transportschutz") installed, as this prevents damage in (long overseas) shipping in which the elastic suspensions may be overly stressed.

The transport lock must be removed before use!

Windshield without black fabric cover
with transport lock

Open windshield without black fabric cover
without transport lock

How to remove the transport lock:

    a)   Remove fur* if installed.
    b)   Remove the black fabric cover.
    c)   Open the lid.
    d)   Carefully remove the spherical foam balls and other foam parts.
    e)   Close the lid.
    f)   Reinstall the black fabric cover.
    g)   Reinstall fur* if desired.

2. ORIENTATION OF THE WINDSHIELD

The **left side of the setup** is marked by a label (LEFT CINELA) on the black fabric and on the fur (SCHOEPS ORTF-2plus2). Orient the windshield according to this label.

3. CHANNEL ALLOCATIONS

The following table shows the channel allocations:

CHANNEL ALLOCATIONS OF THE ORTF-2plus2 SETUP

Channel #	Labeling on the cable outlet and the Multi-core breakout cable	Channel routing
1	Ch 1 (L) – Yellow	L
2	Ch 2 (R) – Red	R
3	Ch 3 (Ls) – Blue	LSh
4	Ch 4 (Rs) – Green	RSh

4. RAIN COVER OR FUR*

The windshield can be used with the black fabric cover alone, or with either fur* (for heavy wind) or the rain cover (for rain) as a second layer. Don't install both the fur* and rain cover at the same time.

The installation is very easy:

Windshield with Rain Cover
(close velcros for use)

Windshield with Fur
(close buttons for use)

*fake fur
